Additional information

Non-financial corporations include all companies whose main activity is the production of goods and non-financial services, excluding sole proprietor and unincorporated partnerships. Calculations are made with the aim to give the best possible image of the evolution of the lending activity. Loans that have been securitized or sold by credit institutions are considered as remaining in their books. Accounting changes that are not reflecting economic transactions, in particular write-offs/write-downs, are eliminated as the impact of statistical modifications in the scope of the MFI sector (e.g. the reclassification of an entity from the non-financial corporations sector to the government sector). As FX hedges are unknown, loans in foreign currencies can however only be taken into account at their value in Euros at the end of the considered month.
